

Update from Reelcraft Industries regarding COVID-19

March 18, 2020

We are proactively monitoring our operations and prioritizing the health and safety of our team members, customers and partners.

- We are actively seeking and implementing industry guidance within our production facilities and have increased cleanliness protocols and social distancing.
- We have implemented a remote work policy for those team members who can be off-site and are utilizing the resulting space to increase social distancing for the limited teams still in our office.
- We are communicating with our suppliers regularly and are confident that we can support customer demands.
- We have cancelled all non-critical business travel and partner visits; but have increased the deployment of digital tools to stay connected remotely.

We will take pride in urgently prioritizing any customer orders for products that will be used to increase the health, safety and productivity of those engaged in the management of the COVID-19 outbreak.
